Summary

Software Engineer with nearly 2 years of experience building production fintech systems end to end, including payments, KYC onboarding, authentication SDKs and compliance tools, with a focus on reliability and security.

Experience

Niyo – Indian Fintech: Cards, Forex and Partner-Bank Products — Bangalore, India
Software Development Engineer I (SDE-1) — *Aug 2025 – Present*
Project Trainee — *Jan 2025 – Jul 2025*

Co-Branded Credit Card Module | *Flutter, Dart, BLoC, GetX, Kotlin, Firebase Remote Config*

- Co-built the module as a **Flutter plugin hosting a React PWA over a JavaScript bridge**, integrating native bank SDKs and live bank APIs for homepage, transactions, card controls, activation and statements.
- Built in-app **credit card bill payment (BBPS)** with a fail-closed status-polling flow that prevents duplicate payments, rolled out behind a Remote Config flag without an app release.
- **Optimized transaction-list rendering** by scoping BLoC rebuilds per tab and replacing a per-frame blur, and built proactive device-token refresh for native bank SDK sessions.

Credit Card Onboarding PWA | *React, TypeScript, Vite, Workbox, Zustand, Sentry, Strapi CMS*

- Built the **credit card onboarding PWA** from an empty repo to production with a teammate, owning the PAN, Video KYC and CKYC flows and a status router mapping 12 CKYC states to 6 screens.
- Built **CMS-driven remote config** (Strapi) for downtime notices and Video KYC agent hours so ops change them without a redeploy, and a secured-card offer on the rejection screen.

Authentication, KYC and Platform SDKs | *React, TypeScript, WebCrypto, Web Locks API, gRPC-Web*

- Built embeddable **OTP login and PAN verification SDKs** for the company's web apps, with HttpOnly-cookie sessions and single-flight token refresh across browser tabs (Web Locks API).
- Built an **end-to-end encrypted telemetry SDK** with gRPC-Web transport, an IndexedDB offline queue and the RSA PKCS#1 v1.5 key wrap that WebCrypto lacks natively.
- Co-developed the company's **end-to-end encrypted HTTP SDK** (Axios, RSA-wrapped AES) as its **top contributor**, building per-domain key routing, cookie-based credentials and encrypted error handling.
- Engineered a shared React design system used by **20 internal apps** to be fully **tree-shakeable**, and **cut the Video KYC SDK by 78%** (2.9 MB to 651 KB) by moving it onto that system.

Forex Compliance Workbench | *React, TypeScript, single-spa micro-frontends, Redux-Saga, Tailwind CSS*

- Built **micro-frontend consoles** for customer risk scoring and KYC review with maker-checker approvals and permission-gated PII, on a modular per-domain API layer with correlation IDs.

React Native App (Flutter Migration) | *Expo, TypeScript, TanStack Query, Zustand, Reanimated, Jest*

- Built the consumer app homepage as **server-driven UI**: 13 CMS-configured sections with offline fallbacks, so the product team changes content and order without an app release.
- Built **partner-bank debit card controls** (lock, block, channel toggles, limits, card details) with OTP-verified changes, plus WebView session seeding for embedded web apps.

Projects

RedCell – Autonomous Red-Team for LLM Agents | *Python, LangGraph, FastMCP, Claude API*

- Built an autonomous **multi-agent red-teaming framework** that attacks tool-using LLM agents with prompt injection and policy evasion, confirming every breach with deterministic checks.
- **Cut attack success from 59.5% to 0%** on a fixed 42-attack offline replay (31% under adaptive attacks) by hardening the target with layered defences, with a CI gate against regressions.

Technical Skills

Languages: TypeScript, JavaScript, Dart, Python
Frameworks & Tools: React, React Native, Flutter, Redux Toolkit, TanStack Query, BLoC, Vite, Webpack, Jest, Vitest, Sentry, Firebase, Git, CI/CD
Concepts: REST APIs, Authentication & Session Security, Encryption, Performance Optimization, Micro-Frontends, Design Systems, Unit Testing

Education

Thapar Institute of Engineering and Technology — Patiala, Punjab
Bachelor of Engineering (B.E.) in Electronics and Communication Engineering — *Oct 2021 – Oct 2025*
